DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jones Jr. et al. (US Pub. No.: 20030132500 A1).

Regarding claim 1, Jones discloses, in figures 1-6 and in paragraphs [0012] – [0014], a method comprising: providing substrate (16); forming sacrificial layer (18) overlying a first portion of the semiconductor substrate; forming an oxide layer (22) overlying second portion of the semiconductor substrate; forming a plurality of nanoclusters (24) overlying the sacrificial layer and the oxide layer. Jones does not disclose removing all the plurality of nanoclusters overlying the sacrificial layer and removing the sacrificial layer completely. However Jones discloses removing the plurality of nanoclusters overlying the sacrificial layer partially and removing the sacrificial layer partially. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings of Jones in removing at least the plurality of nanoclusters overlying the sacrificial layer and removing the sacrificial layer.

Allowable Subject Matter

Claims 2-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 15-29 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The invention is related to a processing of semiconductor integrated circuit devices with nanoclusters and without nanoclusters. The primary reason for the indication of the allowability of claims 2-14 and 15-29 is the inclusion therein, in combination as currently claimed, of the limitation of the method of integrating nanoclusters devices and non-nanoclusters devices on the same integrated circuit.
